Self Definition

My journey into programming began in 2016, evolving from a casual interest to a deep passion. After a decade-long career in sales, I made a deliberate shift to programming because I found it enjoyable alongside my job and realized it could become my chosen profession. This led me to enroll in the Codecool full-stack course in late 2022 to enhance my skills. I am goal-oriented, enthusiastic about learning, and find joy in bringing creative projects to life. My sales background not only enables effective communication and problem-solving but also complements my transition to the dynamic field of programming.

Strength

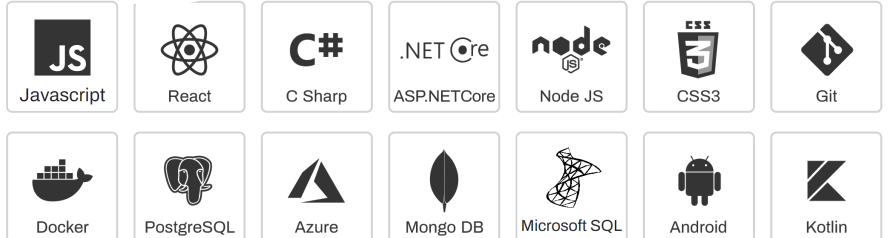

I specialize in JavaScript, React, and C#, with a focus on the OOP approach using the ASP.NET framework. I've also explored diverse technology stacks, expanding my skill set. I'm persistent, thrive in collaborative environments, and excel in effective communication. The creative process of coding and brainstorming brings me immense satisfaction, keeping me open to new ideas and innovative solutions.

Mentor Opinion

"I am excited to recommend Máté for any position he chooses to pursue. He is a great learner and really adaptive too. He showed a high level of teamwork skills with a progress-driven attitude and was a valuable contributor to the projects he worked on. I have no doubt that he will excel in any role he takes on."

— Dénes Csesznegi, mentor

Hard Skills

Recent Projects

PORFOLIO - WEBSITE

<https://github.com/mate153/my-portfolio>

This is a solo project I've developed using React, accompanied by a simple Express server for managing email submissions. The Bootstrap-supported frontend ensures responsiveness while maintaining functionality. It's worth noting that the website is currently under development, with new features actively being added.

DEVFORCE - MANAGEMENT SYSTEM

<https://github.com/ifjandrasmolnar/CompanyManagement>

In this team project, I led the design of the admin panel UI, implemented corporate reports, and played a key role in establishing authentication using the EF CORE Identity framework. Additionally, I actively contributed to the overall ideation and structuring of the project.

QUIZZ TIME - GAME

<https://github.com/mate153/QuizZ>

In this team project, I led the development of two game modes, integrating a database for enhanced functionality. I played a key role in designing mechanics and contributing to three.js for 3D animations, being part of the team implementing these elements. Additionally, I actively shaped the project's creative direction, showcasing expertise in game mechanics and dynamic visual integration.

Work Experience

Retail sales assistant (2016 - 2022) — ProPhone Kft.

Used car sales representative (2012 - 2016) — Mobil Kontakt Line Kft.

Education

Full stack developer (2022 - 2023) — Codecool
